Hose - HOSE R5 RUBBER COVER

## Product Specifications

|                                           |                                                                           |
|-------------------------------------------|---------------------------------------------------------------------------|
| Agency Listings: Government Specification | DNV, MSHA, USCG/MMT                                                       |
| Agency Listings: Industry Specification   | SAE 100R5, ABS                                                            |
| Burst Pressure (bar)                      | 420                                                                       |
| Burst Pressure (psi)                      | 6000                                                                      |
| Description                               | Single wire braid                                                         |
| Family                                    | Hose                                                                      |
| General Application                       | Hydraulics, gasoline, fuel and lubricating oils, air and water.           |
| Hose Base Number                          | 2651                                                                      |
| Inside Diameter (in)                      | 0.63                                                                      |
| Inside Diameter (mm)                      | 16                                                                        |
| Min Bend Radius (in)                      | 6.5                                                                       |
| Min Bend Radius (mm)                      | 165.1                                                                     |
| Outside Diameter (in)                     | 1.08                                                                      |
| Outside Diameter (mm)                     | 27.4                                                                      |
| Reinforcement Material                    | textile inner braid, single wire braid reinforcement, outer textile braid |
| Vacuum (inHg)                             | 28                                                                        |
| Vacuum (kpa)                              | 94.8                                                                      |
| Weight (kg/m)                             | 0.68                                                                      |
| Weight (lb/ft)                            | 0.46                                                                      |

## Notes

Air not to exceed 250 psi or +71C [+160F]
