Havant Phase out of X4 Explosion Proof Solenoids

We regularly review our product offerings to ensure the support of our customers and the availability of our products in order to keep always the competitiveness on the market with high quality and performance products. As a part of this process, we will be phasing out valves with X4 explosion proof solenoids to be replaced by enhanced version X5. This applies to all model codes with X4. See below for the list of affected model codes and part numbers.

As part of the process, the phase out will be effective immediately;

- There will be NO LAST TIME BUY for these X4 explosion proof models.
- The next best alternative to these would be the X5 explosion proof valve models.

Technical details

- X4 is ATEX only
- X5 is IECEx, ATEX, North America (NEC, CEC)
- X5 may be used in place of the X4.
- X5 has lower tank port rating of 70 bar (1,000 psi)

Kindly please work with your respective customer sales representatives to identify on which alternative valve (X5 explosion proof) would work best for your respective applications.

Service Policy:

In case of warranty the affected Havant manufactured DG4V-3-X4 valves should be sent back with an associated RMA. The claim will be raised as retain for credit and after the appraisal we will inform you about the result. If accepted the claim will be closed and a credit will be issued for the valve, if no fault is found the part(s) will be returned back to the customer. If a new replacement is needed then this will be replaced with a new X5 version.

For all inquiries, please contact IMCProductSupport@danfoss.com.
