Havant Phase out of Inline Check Valves – 2019

We regularly review our product offerings to ensure the support of our customers and the availability of our products in order to always keep the competitiveness on the market with high quality and performance products. As a part of this process, we will be phasing out the following Inline Check Valves made in Havant by June 2019:

- DT8P1-02
- DT8P1-03

We recommend using in future the DT8P1-06 and DT8P1-10 range for all Inline Checks.

The cracking pressures will also be restricted to:

- 5 – 0,35 bar (5 psi)
- 30 – 2,0 bar (30 psi)
- 65 – 4,5 bar (65 psi)

The first phase for 2nd Quarter 2019 will be to eliminate the 02 size.

Second phase for 3rd Quarter 2019 will be to eliminate the 03 size.

Service Policy:

In case of warranty the affected Havant manufactured Inline Check Valves should be sent back with an associated RMA. The claim will be raised as retain for credit and after the appraisal we will inform you about the result. If accepted the claim will be closed and a credit will be issued for the valve. If no fault is found the part(s) will be returned to the customer. If a new replacement is needed, then we would like to ask you to place a new order for DT8P1-06 or DT8P1-10. In the event you are still using or thinking to use a discontinued valve, our team will work with you to find as easy as possible an alternative solution.
