Directional Valves DG4V3*-70 design series

Discontinued

All DG valves from the 70-design series are discontinued. The DG-70 valve design was a series of switching valves for a 24V system that included an onboard amplifier with LEDs, EMI protection and a M12 connector.

The original model code is:

Alternatives:

In general, use the 60-design valve with the identical spool using 30 W DIN coils.
For 'Z' version with integrated amplifier add an EHH AMP 702 A 21 power plug for each coil.
For M12 connector version use standard 60-design valve with 18W M12 coils type KUPM4L or use US DG valve with plastic housing FW, FTW, FPA3W or FP5W housing.
