APPLICATION DATA

This product has been designed and tested to meet specific standards outlined in the European Electromagnetic Compatibility Directive (EMC) 2014/30/EU which repealed Directive 89/336/EEC, amended by Directives 91/263/EEC, 92/31/EEC, 93/68/EEC and 93/97/EEC . For instructions on installation requirements to achieve effective protection levels, see the leaflet and Installation Wiring Practices for Danfoss' Electronic Products leaflet 2468 . Wiring practices relevant to this Directive are indicated by $\triangle$ Electromagnetic Compatibility (EMC) .

Vickers® by Danfoss K(B)FD/TG4V proportional valves are designed to provide a controlled oil flow in direct proportion to a command signal. They are available in two types; a double solenoid version that will provide reversible flow to an actuator and a single solenoid throttle version that provides a single direction of flow.

Hydrostats are available for load compensation and parallel flow path modules are available that will boost the flow capacity of single solenoid throttle versions to nearly twice that of the standard valve.

Additionally, both of these valve types can be supplied with or without an integral amplifier built directly onto the valve.

KFD/TG4V-5

This version is supplied without the integral amplifier.

Features and benefits

- Wide range of spool and flow rate options.
- Electronic feedback LVDT ensures accurate spool position control.
- Vibration and shock tested.
- Supported by a broad range of amplifiers and auxiliary function modules.
- Full CE electromagnetic compatibility.

Typical section view

KBFD/TG4V-5-*PE7, 1* Design

KBFD/TG4V-5

A range of proportional directional and throttle valves with integral control electronics. Factory-set adjustments of gain, spool deadband compensation and offset ensure consistent repeatability valve-to-valve.

The only electrical inputs required are power supply (24V) and a voltage command signal of $\pm 10V$ or 4-20 mA. The amplifier is housed in a robust metal enclosure, sealed against ingress of water and other fluids. Electrical connections are via a standard 7-pin plug.

A spool position monitor pin allows the function of the valve to be electrically monitored. Ramp functions, if required, can be generated externally.

Features and benefits

- Factory-sealed adjustments ensure valve-to-valve reproducibility.
- Installation wiring reduced and simplified.
- Standard 7-pin connector.
- Standard 24V DC supply with wide tolerance band.
- Optional $\pm 10V$ DC or 4-20 mA command signals.
- Valve with integrated amplifier selected, ordered, delivered and installed as one performance-tested package.
- Spool position monitor pin to help with troubleshooting.
- Simple valve removal and replacement for service (plug & play).
- Vibration and shock tested.
- Auxiliary DIN rail mounted electronic function modules available. Full CE electromagnetic compatibility.
- Full CE electromagnetic compatibility.- 2014/30/EU
- IP65 & IP67 valve environmental protection rating.
- Optional valve enable function.

Note: Additional configurations available upon request. Please contact your customer sales representative for details.

WARNING

Valves with integral amplifier are supplied with or without the metal 7-pin plug. The Danfoss plug, part no. 934939, must be correctly fitted to ensure that the EMC rating and IP67 rating are achieved. The plug retaining nut must be tightened with a torque of 2-2.5 Nm (1.5-2.0 lbf ft) to effect a proper a proper seal.

Spool symbols

Available spools for K(B)FDG4V-3

Spool type 9C**N, meter-in/meter-out

Spool type 2C**N, meter-in/meter-out(zero lap)

Spool type 2C**S, meter-out only

Spool 33C**N, meter-in/meter-out

Asymmetric spools

Figure preceding metering type designator, "N" (e.g. 2C***N) is flow rating P-A, or A-T ("A" port flow); figure after "N" (N***) is flow rating P-B, or B-T ("B" portflow).

Pressure and flow rates

Maximum pressures, bar (psi)

Model	Port L condition	Ports P, A, B	T	T
All models for normal usage (L port not connected)	Normally blocked by mounting surface	315 (4500)	160 (2300)	160 (2300)
For K(B)FDG4V-5**C**N-Z models only a higher "T" port pressure is allowed if the "L" port is connected directly to tank	Drained directly to tank	315 (4500)	210 (3000)	210 (3000)

Performance curves

Power capacity envelopes

Single solenoid models: K(B)FTG4V-5

Spool types as noted

Looped flow path

Single flow path

Parallel flow path use parallel flow path module:
KDGMA-5-616877-10R or KDGMA-5-02-139150-10S
(see page 16)

Double solenoid models: K(B)FDG4V-5

Spool types as noted

Looped flow path

Flow gain curves

When using the single solenoid throttle valve (K*FT), a dual flowpath module (page 16) can be used to approximately double the flow rate.

Curves shown include deadband compensation provided for the KF valve by the Vickers Eurocard Amplifier EEA-PAM-535-*33 (user adjustable).

KB valves are preset at the factory to compensate for the effect of spool overlap.

K(B)FD/TG4V-5
Spool types as noted

Single flowpath (e.g. P-A) pressure drop, $\Delta p = 5 \text{ bar}$ (72 psi) ■.

■ At other Δp values and within the power capacity envelopes, flow rates approximate to:

$$Q_x = Q_d \sqrt{\frac{\Delta p_x}{\Delta p_d}}$$

Frequency response (typical)

For an amplitude of $\pm 25\%$ max. flow about the 50% flow, at Δp (P-B) = 5 bar (72 psi)

KFD/TG4V-5

Installation dimensions

KFDG4V-5

mm (inch)

3rd angle
projection

KFTG4V-5

mm (inch)

Note: For optimum valve operation, bleed the air from the proportional solenoids at initial start-up. This may be done as follows:

- The valve may be pressurized by removing the bleed screws until no bubbles appear and then reinstalling bleed screws, or...
 - Remove both bleed screws, and use a standard oil can nozzle to pump fluid in one side until it flows, free of air bubbles, out the other side. Reinstall screws.
- If there is no inherent back pressure in the tank port of the circuit do not allow the tank line to empty. This may be prevented by installing a check valve in the tank line.

The cracking pressure of the check valve should be in the range of 22 - 45 psi (1.5 - 3 bar).

* Bleed screw locations air bleed, socket head cap screw.

Torque to 2.5-3.0 Nm (2.0-2.5 lbf ft)

WARNING

Valves with integral amplifiers are supplied with or without the metal 7-pin plug. The Danfoss plug, part no. 934939, must be correctly fitted to ensure that the EMC rating and IP67 rating are achieved. The plug retaining nut must be tightened with a torque of 2.0-2.5 Nm (1.5-2.0 lbf ft) to effect a proper seal.

Subplates and mounting surfaces

General description

If a subplate is not used, a machined pad must be provided for valve mounting. Pad must be flat within 0.0127 mm (.0005 inch) and smooth within 1.6 µm (63 microinch). Mounting bolts, when provided by customer, should be ISO 898 class 12.9 or better.

Dimensional tolerances

Dimensional tolerance on interface drawings is ± 0.2 mm (± 0.008 ") except where otherwise stated. ISO 4401 specifies inch conversion to ± 0.01 ".

Conversion for metric

ISO 4401 gives dimensions in mm . Inch conversions are accurate to 0.01" unless otherwise stated .

Mounting bolt tapping

ISO 4401 gives metric thread tappings. Alternate UNC tapping are Danfoss' recommendations that allow these plates and associated valves to be used up to their maximum pressures, when using Danfoss recommended bolt kits, or bolts of an equivalent strength . It is recommended that customer's own manifold blocks for UNC bolts should be tapped to the minimum depths given in the footnotes .

Subplates

Description and mass kg (lb)	Functional symbol	Model code	Max. Pressure
Single-station subplate; rear ports P, T, A, B; side port L		KDGSM-5-67805-20 (SAE/UNF ports)	210 bar (3000 psi)
Cast iron 1.3 (2.9)		KDGSM-5-615225-10 1/2" BSPF ports KDGSM-5-615226-10 3/4" BSPF ports	315 bar (4500 psi)
		EKGSM-01Y-10-R	280 bar (4000 psi)

Mounting surfaces to ISO 4401(Size 05)

This interface conforms to:

ISO 4401-05-04-0-05

ANSI/B93 .7M (and NFPA) size 05

Interface with additional drain port

Interface with additional drain port

The interface conforms to

ISO 4401-05-06-0-05

Typically used for proportional and other valves requiring an additional drain port, e.g.:

K(B)FDG4V-5

K(B)FTG4V-5

Electrical information

Block diagram

Voltage input (M1) KBFDG4V-5

KBFDG4V-5 wiring

Connections must be made via the 7-pin plug mounted on the amplifier. See page 15 of this leaflet and Danfoss' installation wiring practices for Vickers' electronic products, leaflet 2468 .

Power cables:

For 24V supply 0.75 mm² (18 AWG) up to 20m (65 ft)

1.00 mm² (16 AWG) up to 40m (130 ft)

Signal cables:

0.50 mm² (20 AWG)

Screen (shield):

A suitable cable would have seven cores, a separate screen for the signal wires and an overall screen .

Cable outside diameter 8.0–10.5 mm (0.31–0.41 inches)

See connection diagram on page 16 .

KFDG4V-5 wiring

Wiring details for these valves are contained in the appropriate Eurocard literature and Danfoss' installation wiring practices for Vickers' electronic products leaflet 2468

Command signals and outputs, M1

7-pin plug		Flow direction
Pin D	Pin E	
Positive	OV	P to A
OV	Negative	
	$U_d - U_e = \text{Positive}$	
Negative	OV	P to B
OV	Positive	
	$U_d - U_e = \text{Negative}$	

▲ Pin C is used for a valve enable signal with electrical connections PH7

WARNING

All power must be switched off before connecting / disconnecting any plugs.

Block diagram

Current input (M2) KBFDG4V-5

KBFDG4V-5 wiring

Connections must be made via the 7-pin plug mounted on the amplifier. See page 15 of this leaflet and Danfoss' installation wiring practices for Vickers' electronic products, leaflet 2468.

Recommended cable sizes are:

Power cables:

For 24V supply

0.75 mm² (18 AWG) up to 20m (65 ft) 1.00 mm² (16 AWG) up to 40m (130 ft)

Signal cables:

0.50 mm² (20 AWG)

Screen (shield):

A suitable cable would have seven cores, a separate screen for the signal wires and an overall screen.

Cable outside diameter 8.0–10.5 mm (0.31–0.41 inches)

See connection diagram on page 17.

KFDG4V-5 wiring

Wiring details for these valves are contained in the appropriate Eurocard literature and Danfoss' installation wiring practices for Vickers' electronic products leaflet 2468.

Command signals and outputs, M2

7-pin plug

Pin D	Pin E	Pin B	Flow direction
More than 12 mA	Current return	Power ground	P to A
Less than 12 mA	Current return	Power ground	P to B

Command signals and outputs, M2

WARNING

All power must be switched off before connecting/disconnecting any plugs.

Electrical information

Wiring connections | Voltage input (M1)

Spool position monitor voltage (pin F) will be referenced to the KB valve local ground.

Wiring connections for M1 valves with enable feature

Note: ■ In applications where the valve must conform to European RFI/EMC regulations, the outer screen (shield) must be connected to the outer shell of the 7-pin connector, and the valve body must be fastened to the earth ground. Proper earth grounding practices must be observed in this case, as any differences in command source and valve ground potentials will result in a screen (shield) ground loop.

Wiring connections

Current input (M2)

■ Spool position monitor voltage (pin F) will be referenced to the KB valve local ground.

Wiring connections for M2 valves with enable feature

Note: ▲ In applications where the valve must conform to European RFI/EMC regulations, the outer screen (shield) must be connected to the outer shell of the 7-pin connector, and the valve body must be fastened to the earth ground. Proper earth grounding practices must be observed in this case, as any differences in command source and valve ground potentials will result in a screen (shield) ground loop.

WARNING

Electromagnetic Compatibility (EMC)

It is necessary to ensure that the valve is wired up as above. For effective protection the user electrical cabinet, the valve subplate or manifold and the cable screens should be connected to efficient ground points. The metal 7-pin connector part no. 934939 should be used for the integral amplifier. In all cases both valve and cable should be kept as far away as possible from any sources of electromagnetic radiation such as cables carrying heavy current, relays and certain kinds of portable radio transmitters, etc. Difficult environments could mean that extra screening may be necessary to avoid the interference.

It is important to connect the 0V lines as shown above. The multi-core cable should have at least two screens to separate the subplate demand signal and monitor output from the power lines.

The enable line to pin C should be outside the screen which contains the demand signal cables.

Application data

Fluid cleanliness

Proper fluid condition is essential for long and satisfactory life of hydraulic components and systems. Hydraulic fluid must have the correct balance of cleanliness, materials and additives for protection against wear of components, elevated viscosity and inclusion of air.

Recommendations on contamination control methods and the selection of products to control fluid condition are included in Danfoss' publication 9132 or 561, "Vickers Guide to Systemic Contamination Control". The book also includes information on the Danfoss concept of "ProActive Maintenance".

The following recommendations are based on ISO cleanliness levels at 2 µm, 5 µm and 15 µm:

For products in this catalog the recommended levels are:

0 to 70 bar (1000 psi) 18/16/13

70 + bar (1000 + psi) 17/15/12

Danfoss products, as any components, will operate with apparent satisfaction in fluids with higher cleanliness codes than those described. Other manufacturers will often recommend levels above those specified.

Experience has shown, however, that life of any hydraulic components is shortened in fluids with higher cleanliness codes than those listed above. These codes have been proven to provide a long trouble-free service life for the products shown, regardless of the manufacturer.

Hydraulic fluids

Materials and seals used in these valves are compatible with antiwear hydraulic oils, and non-alkyl-based phosphate esters. The extreme operating viscosity range is 500 to 13 cSt (2270 to 70 SUS) but the recommended running range is 54 to 13 cSt (245 to 70 SUS). For further technical information about fluids see "Technical Information" leaflet B-920 or I-286S.

Installation

The proportional valves in this catalog can be mounted in any attitude, but it may be necessary in certain demanding applications, to ensure that the solenoids are kept full of hydraulic fluid. Good installation practice dictates that the tank port and any drain port are piped so as to keep the valves full of fluid once the system start-up has been completed.

Service information

The products from this range are preset at the factory for optimum performance; disassembling critical items would destroy these settings. It is therefore recommended that should any mechanical or electronic repair be necessary they should be returned to the nearest Danfoss repair center. The products will be refurbished as necessary and retested to specification before return.

Field repair is restricted to the replacement of the seals.

NOTE: The feedback/solenoid assembly installed in this valve should not be disassembled.

Products we offer:

- Cartridge valves
- DCV directional control valves
- Electric converters
- Electric machines
- Electric motors
- Gear motors
- Gear pumps
- Hydraulic integrated circuits (HICs)
- Hydrostatic motors
- Hydrostatic pumps
- Orbital motors
- PLUS+1® controllers
- PLUS+1® displays
- PLUS+1® joysticks and pedals
- PLUS+1® operator interfaces
- PLUS+1® sensors
- PLUS+1® software
- PLUS+1® software services, support and training
- Position controls and sensors
- PVG proportional valves
- Steering components and systems
- Telematics

Danfoss Power Solutions is a global manufacturer and supplier of high-quality hydraulic and electric components. We specialize in providing state-of-the-art technology and solutions that excel in the harsh operating conditions of the mobile off-highway market as well as the marine sector. Building on our extensive applications expertise, we work closely with you to ensure exceptional performance for a broad range of applications. We help you and other customers around the world speed up system development, reduce costs and bring vehicles and vessels to market faster.

Danfoss Power Solutions – your strongest partner in mobile hydraulics and mobile electrification.

Go to www.danfoss.com for further product information.

We offer you expert worldwide support for ensuring the best possible solutions for outstanding performance. And with an extensive network of Global Service Partners, we also provide you with comprehensive global service for all of our components.
