Introduction

Flange Mounted Valve Benefits

- Direct mounting to pump flange reduces potential leak points for superior leak resistance.
- Reduced installed costs and space requirements.
- Excellent repeatability and stable performance from cartridge design main stage parts.
- High response due to small trapped volume.
- Easier installation and servicing of components.
- Pilot design minimizes response time and cracking flow which allows for high pressure stability thus increasing system productivity.
- Fast opening and closing action and stable performance from cartridge design.
- Minimum unloaded pressure drop due to short piping runs.
- Viton seals provide multi-fluid capability without the need to change seals.

Sizes

- 06 – 3/4" flange
- 08 – 1" flange
- 10 – 1 1/4" flange
- 12 – 1 1/2" flange

General Description

Relief Valves

Vickers by Danfoss space saving CPF relief valves improve machine reliability and uptime by limiting the pressure in a hydraulic circuit to the desired maximum, thereby protecting the hydraulic pump and system from pressure peaks. The CPF relief valves are designed to mount on a wide range of SAE pump outlet port flanges to eliminate intervalve piping and fittings.

Direct pump flange mounting of the valves reduces installation costs and provides a highly leak –resistant, compact pump control package.

CPF relief valves are of two –stage design with a fast –acting poppet type main stage for simple, long-lasting and effective operation. The pilot stage features a sensitive adjustment mechanism which allows setting of the pressure in fine increments over a wide range – up to the maximum rating of the valve.

The pressure setting adjustment choices available for the CPF relief valves are the standard screw-type adjuster with locknut, an optional knurled hand knob with set screw lock or a micrometer knob with or without keylock. External remote control/vent connections are available on all models. Additional optional features include various pressure setting ranges and many solenoid valve options on valves so equipped.

These CPF relief valves have excellent dynamic and steady state operating characteristics including stability, fast response and low pressure override. The many available control options make it possible to choose the optimum valve model for industrial and mobile applications. Additionally, CPF valves use many of the same parts of other Vickers by Danfoss products to insure proven durability. For over 70 years, the Vickers name has been synonymous with long, trouble-free service.

Unloading Valves

Unloading valves are used in accumulator charging circuits where a pressure regulator is required to automatically unload the pump. This is done by diverting the pump delivery to the reservoir at low pressure when the desired accumulator pressure is reached. Also, the UPF unloading valve can be used to unload the low pressure side of a double pump.

The UPF unloading valves are designed to mount directly on SAE pump outlet port flanges to eliminate intervalve piping and fittings. Direct pump flange mounting of the valves reduces installation costs and provides a highly leak resistant, compact pump control package.

UPF unloading valves are of two-stage design with a fast acting poppet type main stage for simple, long-lasting, and effective operation. The pilot stage features a sensitive adjustment mechanism which allows setting of the pressure in fine increments over a wide range – up to the maximum rating of the valve.

The pressure setting adjustment choices available for the UPF unloading valves are the standard screw-type adjuster with locknut or optional adjusters with or without keylock. Gage connections for pump and system pressures are available on all models. Additional optional features include various pressure setting ranges and many solenoid valve options on valves so equipped.

Unloading valves may be ordered with or without the integral check valve.

Check Valves

DCPF/DICPF flange mounted right angle and in-line check valves are ruggedly designed for superior shock resistance, reliability and long life.

The check valves may be mounted directly on an SAE pump outlet port flange or may be stacked with a CPF relief valve to provide a pump unloading function. The DCPF/DICPF check valves are not intended for use as an unloading check.

The right angle and in-line check valves are offered in sizes matching the CPF relief valves.

Flange Sizes

- 06 - 3/4 inch flange
- 08 - 1 inch flange
- 10 - 1 1/4 inch flange
- 12 - 1 1/2 inch flange

Benefits

- Direct mounting to pump flange reduces potential leak points for superior leak resistance.
- Reduced installed costs and space requirements.
- Excellent repeatability and stable performance from cartridge design mainstage parts.
- Easier installation and servicing of components (stackable design).
- Pilot design minimizes response time and cracking flow which allows for high pressure stability thus increasing system productivity.

Ratings	CPF1S-06	CPF1S-08	CPF1S-10	CPF1S-12
Maximum flow	100 l/min (26 USgpm)	300 l/min (80 USgpm)	600 l/min (160 USgpm)	600 l/min (160 USgpm)
Maximum pressure:				
P port	275 bar (4000 psi)	275 bar (4000 psi)	275 bar (4000 psi)	275 bar (4000 psi)*
T port	207 bar (3000 psi)	207 bar (3000 psi)	207 bar (3000 psi)	207 bar (3000 psi)

* The CPF1V-12 (code 62 flange) has a P port max. pressure rating of 350 bar (5000 psi).

Hydraulic Response

06 Size: Rate of pressure rise with 2,5 liters (.7 USgpm) of oil under compression = 3450 bar (50000 psi) /second. Maximum overshoot < 8%.

08 Size: Rate of pressure rise with 2,5 liters (.7 USgpm) of oil under compression = 2900 bar (42000 psi) /second. Maximum overshoot < 10%.

10/12 Sizes: Rate of pressure rise with 2,5 liters (.7 USgpm) of oil under compression = 2600 bar (37500 psi) /second. Maximum overshoot < 10%.

General Description

This Vickers by Danfoss CPF1S relief valve features flange mounting for increased design flexibility and reduced external piping. The valve is designed for direct mounting on the SAE flange outlet port of a pump. Fewer leak points and SAE flange connections lead to installations with superior leak resistance.

Pressure relief valves are used to limit or control pressure by directing system flow to the reservoir when system pressure reaches the setting of the valve. System overload is thereby prevented and peak pressures which

could damage the pump and actuating components are eliminated.

The CPF1S valve has excellent dynamic and steady state operating characteristics including stability, fast response and low pressure override. CPF relief valves are of two –stage design with a fast –acting poppet type main stage for simple, long –lasting and effective operation. The many available control options make it possible to choose the optimum valve model for each application.

Pilot Valve Max. T Port Pressure Rating

100 bar (1450 psi) for DG4V-3S valve
 210 bar (3045 psi) for DG4V-3 valve AC
 210 bar (3045 psi) for DG4V-3 valve DC

Electrical Response

Electrical response is defined as the time from initiation of power to the solenoid, to the initiation of pressure rise, with 1,5 liters (.4 USgpm) of oil under compression:

06 size –
 @100 l/min (26 USgpm) = DC - 200 ms
 AC - 160 ms
 08 size –
 @300 l/min (80 USgpm) = DC - 210 ms
 AC - 175 ms
 10/12 size -
 @300 l/min (80 USgpm) = DC - 180 ms
 AC - 160 ms

Hydraulic Response

06 Size: Rate of pressure rise with 2,5 liters (.7 USgpm) of oil under compression = 3450 bar (50000 psi) /second. Maximum overshoot < 8%.

08 Size: Rate of pressure rise with 2,5 liters (.7 USgpm) of oil under compression = 2900 bar (42000 psi) /second. Maximum overshoot < 10%.

10/12 Sizes: Rate of pressure rise with 2,5 liters (.7 USgpm) of oil under compression = 2600 bar (37500 psi) /second. Maximum overshoot < 10%.

General Description

This Vickers by Danfoss CPF2S relief valve features flange mounting for increased design flexibility and reduced external piping. The valve is designed for direct mounting on the SAE flange outlet port of a pump. Fewer leak points and SAE flange connections lead to installations with superior leak resistance.

Pressure relief valves are used to limit or control pressure by directing system flow to the reservoir when system pressure reaches the setting of the

valve. System overload is thereby prevented and peak pressures which could damage the pump and actuating components are eliminated.

The CPF2S relief valves also provide a means of limiting system pressure to the relatively low vented pressure by directing pilot flow to tank by de-energizing the solenoid operated DG4V -3 valve.

The CPF2S valve has excellent dynamic and steady state operating characteristics including stability, fast

response and low pressure override. CPF relief valves are of two –stage design with a fast –acting poppet type main stage for simple, long –lasting and effective operation. The many available control options make it possible to choose the optimum valve model for each application.

- Reduced installed costs and space requirements.
- Easier installation and servicing of components.
- Pilot design minimizes response time and cracking flow which allows for high pressure stability thus increasing system productivity.
- Direct mounting to pump flange reduces potential leak points for superior leak resistance.

Ratings	CPF3/4S-06	CPF3/4S-08	CPF3/4S-10	CPF3/4S-12
Maximum flow	100 l/min (26 USgpm)	300 l/min (80 USgpm)	600 l/min (160 USgpm)	600 l/min (160 USgpm)
Maximum pressure:

T port	207 bar (3000 psi)	207 bar (3000 psi)	207 bar (3000 psi)	207 bar (3000 psi)

* The CPF2V-12 (code 62 flange) has a max. P port pressure rating of 350 bar (5000 psi).

Pilot Valve Max. T Port Pressure Rating

100 bar (1450 psi) for DG4V-3S valve
210 bar (3045 psi) for DG4V-3 valve AC
210 bar (3045 psi) for DG4V-3 valve DC

Electrical Response

Electrical response is defined as the time from initiation of power to the solenoid, to the initiation of pressure rise, with 1,5 liters (.4 USgpm) of oil under compression:

06 size –
@100 l/min (26 USgpm) = DC - 200 ms
AC - 160 ms

08 size –
@300 l/min (80 USgpm) = DC - 210 ms
AC - 175 ms

10/12 size -
@300 l/min (80 USgpm) = DC - 180 ms
AC - 160 ms

Hydraulic Response

06 Size: Rate of pressure rise with 2,5 liters (.7 USgpm) of oil under compression = 3450 bar (50000 psi) /second. Maximum overshoot < 8%.

08 Size: Rate of pressure rise with 2,5 liters (.7 USgpm) of oil under compression = 2900 bar (42000 psi) /second. Maximum overshoot < 10%.

10/12 Sizes: Rate of pressure rise with 2,5 liters (.7 USgpm) of oil under compression = 2600 bar (37500 psi) /second. Maximum overshoot < 10%.

General Description

This Vickers by Danfoss CPF3/4S relief valve features flange mounting for increased design flexibility and reduced external piping. The valve is designed for direct mounting on the SAE flange outlet port of a pump. Fewer leak points and SAE flange connections lead to installations with superior leak resistance.

Pressure relief valves are used to limit or control pressure by directing system flow to the reservoir when system pressure reaches the setting of the valve. System overload is thereby prevented and peak pressures which

could damage the pump and actuating components are eliminated.

This valve features an integrally mounted 3-position solenoid vent valve which requires no additional piping. Energizing the "a" or "b" solenoid selects pressure setting (2) or (1) respectively. With neither solenoid energized the relief valve is vented to limit system pressure to the maximum vent pressure. The CPF4S tri-pressure relief valve is a pressure control unit which can be used to electrically select any one of three preset pressures, or two pressures and vent with the CPF3S.

The CPF3/4S valve has excellent dynamic and steady state operating characteristics including stability, fast response and low pressure override. CPF relief valves are of two-stage design with a fast –acting poppet type main stage for simple, long-lasting and effective operation. The many available control options make it possible to choose the optimum valve model for each application.

General Description

This Vickers by Danfoss UPF1S unloading valve features flange mounting for increased design flexibility and reduced external piping. The valve is designed for direct mounting on the SAE flange outlet port of a pump. Fewer leak points and SAE flange connections lead to installations with superior leak resistance.

Unloading valves are used in accumulator charging circuits where a pressure regulator is required to automatically unload the pump by diverting the pump delivery to the reservoir, at low pressure, when the

desired accumulator pressure is reached. These valves may also be used to unload the low pressure side of double pumps. The unloading valves also function as pressure relief valves when the remote pressure is lower than the plunger pressure setting.

In construction, an unloading valve contains a compound relief valve with a poppet-type main stage, an integral (when ordered per model code) check valve to prevent reverse flow from the accumulator, and a pressure operated plunger which vents the relief valve at the selected pressure.

The UPFS valve has excellent dynamic and steady state operating characteristics including stability, fast response and low pressure override

UPF valves are of two –stage design with a fast –acting poppet type main stage for simple, long –lasting and effective operation. The many available control options make it possible to choose the optimum valve model for each application.

General Description

This Vickers by Danfoss DCPFS check valve is flange mounted to increase design flexibility and reduce external piping. Fewer leak points and SAE flange connections lead to installations with superior leak resistance.

The DCPFS check valve is designed for direct mounting on a pump flange, or may be stacked with the CPF series relief valves to provide a pump unloading function. The DCPFS is not intended to be used with the UPFS unloading valve.

Poppet design lifts easily to permit flow and reseats quickly to form a leakproof check to block flow in the opposite direction. The DCPFS check valves can be mounted in any position.

The DCPFS check valve has excellent operating characteristics with sizes that make it possible to choose the optimum model for each application.

Right Angle Check Model Code

(F3) DC PF S - ** - ** - 20

1 2 3 4 5 6 7

1 Special Seals

F3 - For mineral oil & fire resistant fluids.
(Omit if not required)

4 Flange Type

S - SAE J518 4-bolt flange standard,
series code 61

6 Spring Cracking Pressure

5 - 0,3 bar (5 psi)
50 - 3,4 bar (50 psi)
75 - 5,2 bar (75 psi)

2 Valve Function

DC - Check valve

5 Valve Size

08 - 1 " flange
10 - 1 1/4 " flange
12 - 1 1/2 " flange

7 Design Number, 20 Series

Subject to change. Installation
dimensions unaltered for design
numbers 20 to 29 inclusive.

3 Mounting Type

PF - Pump flange mounting

In-Line Check Valves

Flange Sizes

- 06 - 3/4 inch flange
- 08 - 1 inch flange
- 10 - 1 1/4 inch flange
- 12 - 1 1/2 inch flange (Available with Code 62 high pressure.)

Ratings	DICPFS-06	DICPFS-08	DICPFS-10	DICPFS-12*
Maximum flow	120 l/min (32 USgpm)	300 l/min (80 USgpm)	600 l/min (160 USgpm)	750 l/min (200 USgpm)
Maximum pressure	350 bar (5000 psi)	350 bar (5000 psi)	280 bar (4000 psi)	207 bar (3000 psi)

* DICPFS-12 Code 62 high pressure flange is rated at 750 l/min (200 USgpm) at 350 bar (5000 psi)

Features

- Direct mounting to SAE flange.
- Compact, robust design.
- Low pressure drop design.
- Wide flow/pressure range.

General Description

Vickers by Danfoss flange mounted in-line check valves can be used with the existing line of flange mounted pressure controls. The DICPF in-line check valves come in four sizes, 06 (.75 "), 08 (1 "), 10 (1.25 ") and 12 (1.50 ").

These are direct, flange mounted, in-line check valves with SAE 4-bolt mounting. They may be mounted directly on an SAE pump flange, actuator, manifold or may be stacked with a Vickers by Danfoss CPF relief valve to provide a pump unloading function.

This mounting style results in a much smaller space requirement and eliminates plumbing and potential leak points that result from installation of conventional line mounted check valves.

These check valves are not to be used with the UPF flange mounted unloading relief valves.

In-Line Check Model Code

1 Valve Function DIC – Direct inline check	3 Flange Type S – SAE J518 4-bolt flange, std. pressure series, code 61 V – SAE J518 4-bolt flange, high pressure series, code 62 (1.50 in. models only)	5 Cracking Pressure 05 – 0,3 bar (5 psi) 25 – 1,7 bar (25 psi)
2 Mounting Type PF – Pump flange mounting	4 Valve Size 06 – 0.75 in. flange, SAE-12 08 – 1.00 in. flange, SAE-16 10 – 1.25 in. flange, SAE-20 12 – 1.50 in. flange, SAE-24	6 Design Number

Fluid Cleanliness

Hydraulic Fluid Information

Essential information on the correct methods for treating hydraulic fluid is included in Vickers by Danfoss publication 561; "Vickers Guide to Systemic Contamination Control," available from your local Vickers by Danfoss distributor or by contacting Danfoss Power Solutions.

Recommendations on filtration and the selection of products to control fluid condition are included in Vickers by Danfoss publication 561.

Recommended cleanliness levels using petroleum oil under common conditions is based on the highest fluid pressure levels in the system:

In referencing the table below, the shaded area highlights the recommended cleanliness level for flange mounted valves.

Fluids other than petroleum, severe service cycles or temperature extremes are cause for adjustment of these cleanliness codes. See Vickers by Danfoss publication 561 for exact details.

SYSTEM PRESSURE LEVEL			
PRODUCT	69 bar (1000 psi)	138 bar (2000 psi)	207+ bar (3000+ psi)

Danfoss Power Solutions is a global manufacturer and supplier of high-quality hydraulic and electric components. We specialize in providing state-of-the-art technology and solutions that excel in the harsh operating conditions of the mobile off-highway market as well as the marine sector. Building on our extensive applications expertise, we work closely with you to ensure exceptional performance for a broad range of applications. We help you and other customers around the world speed up system development, reduce costs and bring vehicles and vessels to market faster.

Danfoss Power Solutions – your strongest partner in mobile hydraulics and mobile electrification.

Go to www.danfoss.com for further product information.

We offer you expert worldwide support for ensuring the best possible solutions for outstanding performance. And with an extensive network of Global Service Partners, we also provide you with comprehensive global service for all of our components.
