MPV3-10

Manual Pull Valve with Detent, 2-Way, Normally Closed, Poppet Type

210 bar [3000 psi] • 45 l/min [12 US gpm]

DESCRIPTION AND OPERATION

This is a 2-way, normally closed, poppet type, pull to open directional control valve with a detent. In the normal position, flow is blocked from 2 to 1, while free reverse flow takes place from port 1 to 2 after overcoming the spring bias. When the knob is manually pulled upward, port 1 is connected to port 2 allowing free flow in both directions. The valve can be held open by twisting the knob to engage the detent. This is ideal for emergency lowering applications.
